Two Tier Architecture on Kubernetes

Please provide your name and AWS account ID:

What steps did you take to get the front-end up and running? Any specific challenges?

How did you connect the front-end with the back-end? How did you find out what was necessary?

Document the implementation process here. Include all key actions taken (commands, manifest(s), manual actions etc.). Be specific!

Did you attempt the Bonus question(s)? If yes, please describe how you achieved the results.

What was the most difficult part of the challenge and why?

Why do you want to work at AWS?
